The social determinants of health are the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life. Varying conditions of daily life across social groups and populations result in inequalities (disparities) in health status and access to health resources, such as health care. Disparities in epilepsy and epilepsy care have been identified based on such factors as socioeconomic position, race/ethnicity, or place of residence. Knowledge about the social determinants in epilepsy informs public health, health care, and community strategies to eliminate disparities and improve care and outcomes for all people living with epilepsy.

You can positively impact the lives of your patients by increasing your knowledge of epilepsy. This webinar will provide you with an overview of social determinants of health in epilepsy; after completing the webinar, participants should be able to:

- Describe the social determinants of health framework
- Define and distinguish between health disparities and health inequities
- Identify the social determinants of health and disparities in epilepsy and epilepsy care
- Identify strategies to address disparities in epilepsy and epilepsy care
- Discuss the role of advocacy groups, health care systems, academic institutions, and community partnerships in eliminating disparities in epilepsy and epilepsy care

Guest Speaker
Magdalena Szafarski, PhD
Associate Professor, Department of Sociology
Scientist in Medicine & Public Health
The University of Alabama at Birmingham

Webinar Moderator
Ron Manderscheid, PhD
Executive Director, National Association of County Behavioral Health & Developmental Disability Directors
Executive Director, National Association for Rural Mental Health
Adjunct Professor, Department of Mental Health
Bloomberg School of Public Health
Johns Hopkins University
